January 22, 2010, Rybinsk. - The consulting company "McKinsey& Company, Inc" has begun work at OAO NPO Saturn on the implementation of lean technologies. Situation analysis, development of a change plan, preparation and selection of a team for their implementation are the main tasks that will be solved "McKinsey"by the end of February 2010, in order to increase the production capacity of the SaM146 engine. The result of the six-week work will be a complete analysis of the state of the production process and the development of recommendations, non-investment and investment areas, on the main blocks of production issues: organization and planning of production, personnel management , procurement of materials and components, etc.
Within the framework of cooperation with "McKinsey" NPO "Saturn" created a steering committee, headed by the managing director of NPO "Saturn" Ilya Fedorov, and a working group, which included specialists from production services, personnel, information technology, logistics, quality, main th engineer; representatives of "Snekma" and "GSS" take part in the meetings of the working group, if necessary. Attracting a world-famous company specializing in the improvement of production and management - industrial consulting, is associated with the complexity and diversity of the tasks facing NPO Saturn. This is putting into series and reaching the production volumes of the SaM146 engine specified by the customer.preferenceMcKinseydue to the successful cooperation of this consulting company with the customer of the SaM146 engine, Sukhoi, and Saturn's partner in the SaM146 program, the French company Snecma. OAO Scientific and Production Association Saturn is an engine building company specializing in the development, production and after-sales service of gas turbine engines for military and civil aviation, ships of the Navy, power generating and gas pumping units. United Engine Corporation" - a wholly-owned specialized subsidiary of OAO OPK OBORONPROM for the management of engine-building assets. OAO United Industrial Corporation OBORONPROM is a diversified machine-building group, established in 2002. It is part of the Russian Technologies Group of Companies. Main activities: helicopter building (JSC Russian Helicopters), engine building (MC UEC), other assets.
